

VOScope

Features of the V7 brush (70001) and broom (70002):

1. V-shaped electrostatic bristles sweep more effectively than traditional round bristles. Picks up fine particles such as dust, sand, pet hair, sugar, etc.
2. No need to apply too much pressure when sweeping. The lighter you move the brush, the better it sweeps !! Best when brushing with small brief strokes.
3. Built in squeegee to remove water from windows, boat decks and many other surfaces, remove snow, etc. Ideal for boats, RVs, cars, campers, etc.
4. The bristles are oil and acid resistant. Use in a workshop to sweep away fluids, oil, metal shavings or wood shavings.
5. When bristles become dirty, simply rinse it with mild detergent and water.
6. Brush has a handle which pivots 360 degrees. Broom has a telescopic handle.
